# INDIAN ECONOMY AT A CROSSROAD - AN INDEPTH STUDY OF ITS MANUFACTURING SECTOR (ALUMINIUM AND ALUMINIUM PRODUCTS) FROM 2000 TO 2015. 

Prof. Dastgeer Alam (MBA,Ph.D)
Director,
Dept of Business Studies,
Lords Institute of Engineering \& Technology
Himayath Sagar, Hyderabad-500091

## Telangana.

| Purpose of this paper | "Make in India" is a campaign which is backed by the present Government. When we are inviting other manufacturing companies on our soil a peek into the already existing players should help prospective players to test the waters. |
| :---: | :---: |
| Design/methodo <br> logy <br> /approach | CMIE's Prowess Database is a comprehensive database offering historical and present data on a whole set of indicators. For understanding past performance, operating expenses as a percentage of sales and predicting future performance total outside liabilities over total net worth have been taken for study. A sixteen year period from the year 2000 to 2015 has been selected. It is an exhaustive time to arrive at a concrete representation of performance. Only fifteen companies in the Aluminium sector have been taken. A similar study can be done for all the other sectors. |
| Findings | In the final analysis for operating expenses as percentage of sales for the aluminium industry, out of fifteen companies 2 are in the Danger zone, 2 are highly worrisome, 3 are giving little worries, 5 are stable and only 3 companies have improved in the period under question. |
| Research limitations | Only two indicators have been taken for study. But there are many factors which will help in rationalizing the performances of companies. |
| Practical implications | Technical analysis which is becoming a fad for predicting stock markets has weak roots. Fundamental analysis will always remain a central concept for evaluating actual performances of companies. |
| Social <br> Implications | Before inviting guests over lunch, we should see that proper food has been prepared and there is enough for family members. Companies which are already operating for so many years, if they are finding the goings tougher for them there is no sense in inviting others and creating <br> a resource crunch. |

| What | The paper deals with an in depth analysis. The "Make in India" campaign should highlight <br> original/value of <br> paper |
| :--- | :--- |
| the fact that most of the companies of most of our manufacturing sectors are giving <br> excellent returns to the stakeholders and there is enough scope for others to contribute to |  |
| the explosive growth which this great country is going to experience as manifest in the |  |
| stock markets. |  |

#### Abstract

Manufacturing sector of any country is the backbone of its economy ${ }^{1}$. An efficient and robust manufacturing sector is a precursor to a sustainable economic development. In the present study the authors have carried out a detailed time series analysis of the Indian Manufacturing companies. Two key indicators have been chosen for study i.e Operating Expenses as a percentage of sales and change in stock (read "Sales and change in stock" as one word ) and Total Outside Liabilities as a percentage of Total Net Worth for a company (TOL / TNW). Total number of companies in the Manufacturing sector are approximately $10,290^{2}$. But, when the indicators were sifted for a period of sixteen years only 1931 companies could stand the test of providing data on these two indicators. Other companies did not have complete data for the period under study. So, finally these 1931 companies were chosen for analysis.

These companies were further categorised on the basis of their nearness to the customer. This categorisation is arbitrary and based on the author's judgement. It is explained later. Second level categorisation is as per the Industry group. In all 98 industry groups were identified by the Prowess database. If the operating expense as a percentage of sales decreases for a company it is a good sign and a manifestation of Productivity and Efficiency. On the other hand if it is increasing over the years it reflects decreasing efficiency and bad times ahead. Moreover, a similar trend for TOL / TNW is also an indicator of sustainable profitability and a bright future. Finally, a correlation study between the two will identify companies for whom a few nails have been struck in their coffin and those for whom there is still time to gain control over their belongings.

[^0]KEYWORDS - Operating Expenses as a percentage of Sales and Change in Stock (OPOS), Total Outside Liabilities over Total Net Worth (TOL / TNW),

## INTRODUCTION

The "Make In India" campaign which is being run diligently by the present Government has a strong underlying note for Foreign Multinationals to setup or revamp their manufacturing bases in India. It is but logical to first analyse the position of manufacturing companies which are already operating in the country. Many of them are in existence for the past fifty years or more. The final analysis will throw light on the state of affairs of the existing companies and will also provide others an opportunity to test the waters for setting up new bases.

The key indicators chosen for analysis are OPOS and TOL/TNW. Other details are:
Manufacturing Sector - Approximately 10,290 companies.
Time Period - Sixteen Years ( from 2000 TO 2015 )
Indicators - Operating expenses as a percentage of sales and the ratio of Total outside liabilities to Total Net Worth.

Available Data - Out of 10,290 companies for the time period under question, data is consistently available for only 1930 companies.

## RESEARCH METHODOLOGY

All the data is aggregate secondary data of all companies for the manufacturing sector, collected from CMIE's Prowess database. Simple Bi-variate correlation has been employed by the researchers in calculating growth rates. Data has been collected for sixteen years i.e. from 2000 to 2015.

MACRO ANALYSIS - The Table below depicts the Annual Mean of Operating expense as a percentage of Sales (OPOS) for all 1930 Companies from 2000 TO 2015.

## TABLE NO -1

|  | Mean <br> $(\%)$ |
| :--- | :--- |
| OPOS2000 | 94.03 |
| OPOS2001 | 95.38 |
| OPOS2002 | 95.08 |
| OPOS2003 | 93.26 |
| OPOS2004 | 91.30 |
| OPOS2005 | 92.80 |
| OPOS2006 | 94.33 |
| OPOS2007 | 101.06 |
| OPOS2008 | 98.09 |
| OPOS2009 | 97.38 |
| OPOS2010 | 102.78 |
| OPOS2011 | 100.48 |
| OPOS2012 | 145.52 |
| OPOS2013 | 94.69 |
| OPOS2014 | 103.26 |
| OPOS2015 | 89.80 |

Below is the graph for the above table.

Above is a mean figure and we can see that it has fluctuated over the years and finally ended on a positive note. For example, for the year 2000 even though the overall mean is 94.3 , operating expenses for an efficient company may be 25.00 whereas for an inefficient company it can go up to $150.00 \%$. But for all the 1930 companies taken together their arithmetic mean is 94.03 . Collectively seen this figure has crossed the $100 \%$ barrier and gone up to $145 \%$ ! in 2012. It has finally ended at $90 \%$ in 2015. But for the country as a whole the trend is worrisome.

## TABLE NO. 2

Annual Mean of the ratio of Total Outside Liabilities to Total Net Worth (TOL / TNW)

|  | Mean |
| :--- | :--- |
| TOL2000 | 2.36 |
| TOL2001 | -.29 |
| TOL2002 | 3.24 |
| TOL2003 | .98 |
| TOL2004 | 4.41 |
| TOL2005 | .06 |
| TOL2006 | 1.11 |
| TOL2007 | 1.69 |
| TOL2008 | 2.11 |
| TOL2009 | 3.39 |
| TOL2010 | .74 |
| TOL2011 | .49 |
| TOL2012 | .83 |
| TOL2013 | 1.39 |
| TOL2014 | -.34 |
| TOL2015 | .94 |

GRAPH NO. 2

Collectively speaking, trend for this indicator is a solace except for 2007,2008 and 2009. A negative ratio indicates that money is lent.

## FIRST LEVEL CLASSIFICATION -

For a deeper analyses, these 1930 companies have been further classified into four groups on the basis of their nearness to the customers. They are

1. Basic Industries They are those which are the farthest from the customer. (for e.g Steel).
2. Basic Intermediate - These industries come next in the value chain. (for e.g Agricultural Machinery)
3. Customer Intermediate - Those which feed customer goods industries (for e.g Cement products) and
4. Customer goods which are the nearest (for e.g Two and Three wheelers).

The concept is, a consistently high opos in the basic industries will not portend good for those which are lower in the value chain. So a comparative figure will give us a better picture among these groups.

## TABLE NO. 3

Annual Mean of Operating expense as a percentage of Sales (OPOS) for all 1930 Companies from 2000 TO 2015 further grouped on the basis of nearness to the customer.

|  | INDUSTRY BASIC CODES |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
|  | Basic | Basic | Customer | Customer |
|  |  | Intermediat | Intermediat | Goods |
|  |  | e |  |  |
|  | Mean | Mean | Mean | Mean |
| OPOS2000 | 97.86 | 92.00 | 92.20 | 102.07 |
| OPOS2001 | 83.71 | 93.58 | 99.57 | 93.26 |
| OPOS2002 | 52.59 | 104.75 | 93.94 | 96.29 |
| OPOS2003 | 93.73 | 92.63 | 92.84 | 95.72 |
| OPOS2004 | 96.09 | 82.40 | 95.99 | 96.42 |
| OPOS2005 | 90.77 | 91.20 | 94.59 | 92.46 |
| OPOS2006 | 92.00 | 91.10 | 97.13 | 95.02 |
| OPOS2007 | 93.59 | 91.25 | 112.36 | 95.39 |
| OPOS2008 | 113.50 | 89.75 | 104.40 | 92.23 |
| OPOS2009 | 94.99 | 94.32 | 99.79 | 98.79 |
| OPOS2010 | 90.55 | 89.31 | 120.90 | 88.56 |
| OPOS2011 | 101.75 | 96.48 | 105.33 | 95.32 |
| OPOS2012 | 97.94 | 236.44 | 93.11 | 106.60 |
| OPOS2013 | 103.81 | 88.73 | 95.56 | 101.72 |
| OPOS2014 | 87.41 | 117.74 | 96.60 | 96.00 |
| OPOS2015 | 89.80 | 88.61 | 103.04 | 98.69 |

The arrows help us to discern the effects of an increase in the operating expenses of Basic goods in the increased percentage of Intermediate goods after a time lag of 3 to 5 years.

TABLE NO. 4

|  | INDUSTRY BASIC CODES |  |  |  |
| :--- | :--- | :--- | :--- | :--- |
|  | 1.00 | 2.00 | 3.00 | 4.00 |
| TOL2000 | Mean | Mean | Mean | Mean |
| TOL2001 | -5.18 | 4.80 | 1.78 | -1.83 |
| TOL2002 | 4.91 | 5.42 | .75 | 1.56 |
| TOL2003 | -.30 | -.04 | 1.46 | 2.61 |
| TOL2004 | .83 | .59 | 8.99 | 1.99 |
| TOL2005 | -.59 | -2.67 | 1.58 | 2.40 |
| TOL2006 | -.18 | 1.59 | .96 | 1.07 |
| TOL2007 | 1.59 | 1.28 | 2.15 | 1.40 |
| TOL2008 | 6.95 | 2.37 | 1.31 | 1.49 |
| TOL2009 | 1.94 | 7.66 | .78 | 1.52 |
| TOL2010 | .50 | 1.58 | .36 | .00 |
| TOL2011 | -1.99 | .04 | 1.70 | -.71 |
| TOL2012 | 2.24 | -2.78 | 3.21 | 1.75 |
| TOL2013 | 1.72 | 1.31 | 1.30 | 1.65 |
| TOL2014 | 4.47 | .37 | -3.35 | 4.30 |
| TOL2015 | 2.41 | 1.37 | .24 | 1.26 |

A high TOL / TNW ratio threatens the long term sustainability of profits for companies. As per the above table every group has had its' highs and lows for this indicator. These have been marked in bold for each group. A negative ratio indicates it has lent money.

## SECOND LEVEL CLASSIFICATION -

For further granularity, the companies have been classified on the basis of their industries. 98 groups have been formed as under.

TABLE NO 5.

|  | INDUSTRY | CODE | basic code |

| 94 | OTHER INDUSTRIAL MACHINERY | 226 | 2 |
| 95 | OTHER LEATHER PRODUCTS | 341 | 3 |
| 96 | OTHER NON FERROUS METALS | 227 | 2 |
| 97 | OTHER TEXTILES | 228 | 2 |
| 98 | OTHER TRANSPORT EQUIPMENTS | 229 | 2 |

The following table gives an idea on the kind of analysis that can be carried out on all the industries. For example we have taken the Aluminium \& Aluminium products industry with its fifteen companies. The final picture which evolves categorises a company as

1. Danger ( If the increase in OPOS is very high)
2. Worrisome (Medium)
3. Worrisome (Small)
4. Stable
5. Improved

TABLE NO 6. -

|  |  | $\begin{array}{\|l\|} \hline \text { Opos } \\ 2000 \end{array}$ | $\begin{aligned} & \hline \text { Opos } \\ & 2001 \end{aligned}$ | ........ | $\begin{array}{\|l\|} \hline \text { Opos } \\ 2014 \end{array}$ | $\begin{aligned} & \text { Opos } \\ & 2015 \end{aligned}$ | Trend |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | Alicon Castalloy Ltd. | 84.94 | 80.92 |  | 91.31 | 91.15 | Worrisome (S) |
| 2 | Bharat Aluminium Co. Ltd. | 88 | 97.7 | ...... | 92.21 | 96.63 | Stable |

| 5 | Golkonda Aluminium Extrusions Ltd. | 102.75 | 102.96 | $\ldots$ | 710 | 710 | Danger |
| 6 | Gujarat Foils Ltd. | 96.01 | 97.19 | $\ldots$ | 89.67 | 88.99 | Improved |
| 7 | Hind Aluminium Inds. Ltd. | 95.79 | 92.14 | ...... | 96.72 | 96.58 | Stable |
| 8 | Metal Powder Co. Ltd. | 77.57 | 78.98 | .... | 84.1 |  | Worrisome (S) |
| 9 | National Aluminium Co. Ltd. | 53.06 | 51.34 | $\ldots$ | 83.04 | 74.95 | Worrisome (M) |
| 10 | Nirav Commercials Ltd. | 99.02 | 103.16 | ..... | 96.44 | 99.12 | Stable |
| 11 | P G Foils Ltd. | 93.76 | 95.27 | $\ldots$ | 99.46 | 95.63 | Stable |
| 12 | Sacheta Metals Ltd. | 80.18 | 89.52 | $\ldots$ | 93.77 | 95.24 | Worrisome (M) |
| 13 | Sudal Industries Ltd. | 96.32 | 97.23 | ...... | 91.31 | 96.56 | Stable |
| 14 | Sundaram-Clayton Ltd. | 88.95 | 88.56 | $\ldots .$. | 91.53 | 91.38 | Worrisome (S) |
| 15 | Synthiko Foils Ltd. | 97.47 | 107.59 | $\ldots .$. | 93.38 | 93.9 | Improved |

As we can see in the final granular analysis for the aluminium industry out of fifteen companies 2 are in the Danger zone, 2 are highly worrisome, 3 are giving little worries, 5 are stable and only 3 companies have improved.

A similar study can be done for the other indicator i.e TOL / TNW.

## BI-VARIATE CORRELATION.

If a correlation study is carried out between the two indicators and a positive correlation which is statistically significant ( we have not carried out any statistical analysis, it is beyond the scope of this paper ) for a company emerges it implies a very precarious position for the company. It portrays that a company's operating expense is increasing and at the same time its' outside liabilities as a percentage of it's net worth is also increasing. If on the other hand, both are decreasing then also Pearsons product moment correlation coefficient ' $r$ ' will still show a positive correlation which in fact is a good sign. So just by looking at ' $r$ ' depiction will not be complete.

Furthermore, if one indicator decreases and the other increases it will show a negative correlation and the negative sign will not reflect as to which indicator is improving and which one is deteriorating. For a complete representation, both the columns will have to be read in conjunction.

## CONCLUSION

"Make in India" is a campaign which is backed by the present Government. When we are inviting other manufacturing companies on our soil a peek into the already existing players should help prospective players to test the soil.

This paper has dealt with an in depth analysis. The "Make in India" campaign has highlighted the fact that most the companies, of most of our manufacturing sectors are giving good performance and there is enough scope for others to contribute to the explosive growth which this great country is going to experience as manifest in the stock markets. But, still the question remains that if the existing companies have such high operating ratios then how do we safeguard the long term existence and sustainability of these companies?
